#### **How to Call Python Functions**

**Function:** changeWetlandType(newType)

Changes between Free Water Surface or Subsurface Wetland Purpose:

**Inputs Input Options** 

"FWS" newType

"SSF"

**Function:** changeModel(newModel)

Controls which model is used for calculations **Purpose:** 

**Inputs Input Options** 

"reed" newType

"kadlec2009" "kadlecPkC" "kadlec1996" "KadleckC"

**Function:** area(qualityType)

Purpose: Calculates necessary area

**Inputs Input Options** 

"BŌD" qualityType

"TSS"

"organicNitrogen"

"ammonia" "nitrate"

"totalNitrogen" "totalPhosphorus" "fecalColiform"

cells= integer value k= integer value c\_i= integer value

**Function:** printArea(qualityType) Prints area to console **Purpose:**

#### **Potential Weltand Site Data**

Site name: CEFONMA

• City/Community: Xix, Guatemala

• Current Population: 150 (Half day students, half boarding students)

• Future Population: 450

Other anticipated Wetland Uses (nature study, hunting, aquaculture, other):

Key/sensitive wildlife habitat:

Site substrate material (e.g., sand, clay, muck, sandy clay, clayey sand, etc.):

• Substrate permeability: high medium low

#### %Vegitation Cover:

- Submergent:
- Emergent:
- Meadow:
- Forest:

Land area available:

Proximity to water/wastewater source:

- Zoning:
- Ownership:

#### Adjacent land use:

- Zoning:
- Ownership:

Presence of existing or potential limiting land use (e.g., environmentally sensitive areas, etc.):

Protected species historical or archealogical resources on or near site:

Aquifers, aquitards, or natural wetlands (note location):

% of Available land area covered by natural wetlands:

Type of natural wetland (marsh, openwater, floating aquitic, etc):

Dominant plant species:

Site topography (flat, rolling, steep, other):

- Is the wetland/site landlocked? Yes No
- If no, what water body will/does teh treatment wetland discharge to?

Water body classification:

Wetland outlet location and description:

Upland buffer zone description:
